

UTILIZATION MANAGEMENT

Utilization Management offers a list of services to the 22nd Medical Group – including, but not limited to:

- Conducting a retrospective review of patients determined to be high utilizers of clinic resources in hopes of finding better ways to offer them optimized medical care in tandem with medical management team huddles with McConnell Primary care Provider (PCM) teams and other outside health care agencies.
- Working as a part of the Patient Centered Medical Home (PCMH) Medical Management team to keep the PCM teams and SGH abreast of their patient's population trends.
- Looks at all components of the MTF healthcare delivery system, including care within the clinic, specialty care and care provided in inpatient settings.
- Utilization Management wants to ensure patients receive the right care, at the right time, in the right place and with the right provider.
